Mobile Home Weatherization

This course will cover weatherization testing and techniques for mobile homes. Participants will learn about the energy use problems that make mobile homes high energy users, and how to identify and correct those problems.

The three-and-a-half day course will include classroom, lab and hands-on training. A certificate will be given to participants who pass the written and hands-on tests.

What you will learn

- Basic mobile home construction
- Heating system basics
- Duct sealing techniques
- Air sealing techniques
- Belly repair
- Insulation techniques
- Blower door and pressure diagnostics for mobile homes

Instructors

John Langford has been associated with the Virginia WAP since 1977, starting as a program coordinator, then becoming a private contractor in 1982. He has been a trainer/presenter for AECP¹ and NRCERT sponsored workshops since 1993.

John Bodtmann has been involved in the Weatherization Assistance Program for over 17 years. He has prior experience as the State Field Monitor, a local Estimator/Inspector and has been a trainer/presenter associated with NRCERT since 2007.
